

Cynex Discord MT5

Contact me after your purchase to claim your complete package

After your purchase, send me a private message on MQL5 to receive your PDF user guide, access to the online course and MQL5 channel, setup assistance, and Smart Universal Expert Advisor FREE as your gift.

Publish. Receive. Control.

Cynex Discord MT5 connects MetaTrader 5 to your Discord bot in both directions. Receive supported BUY and SELL messages, publish signals from custom indicators A and B, share confirmed trade activity and manage eligible trades from a private control channel.

Configure everyday settings from the on-chart dashboard: Overview, Indicators, Discord, Execution, Activity and Help. No separate Windows connector, DLL or external subscription is required.

Choose your workflow

- Receive supported text and embed signals from a channel your bot can access.
- Filter source authors and optionally accept signals from other bots or webhooks.
- Publish indicator A and B independently, with separate execution and publication switches.
- Distinguish signal-only posts from confirmed MT5 trade events.
- Pair your private control user and optionally authorize additional user IDs.

Control and manage trades

- BUY and SELL market entries; limit and stop orders from private control.
- Status, position lists, pause and resume commands.
- Full or percentage partial close, pending cancellation, SL and TP changes, and break-even requests.
- Reviewable confirmation before closing all managed positions.
- Choose control scope: Cynex trades, Cynex plus manual trades, or all eligible trades.

Configure execution and indicators

- Default fixed lots, optional maximum lots, managed trade count and estimated stop-loss amount checks.
- Spread, deviation, entry tolerance, quote freshness and exact symbol aliases.
- Required protection or configurable fixed-distance fallback; pending expiry.
- Independent indicator paths, symbols, timeframes, direction and price buffers, empty values and typed input parameters.
- Test / Preview reads saved indicator settings without executing or publishing.
- Twenty-four in-panel help topics cover bot setup, routes, commands, indicators and troubleshooting.

Clear state and recovery

Saved settings and durable message records support restart recovery and duplicate suppression. New entries start paused after initialization and settings changes. Indicator sources establish a fresh baseline instead of trading historical arrows on attachment.

Discord rate limits are respected. After uncertain publication, recent message history is checked for a matching delivery receipt. Unresolved actions remain visible for review rather than being blindly repeated.

Setup and requirements

- Use your own Discord bot with Message Content Intent and appropriate channel permissions. Personal Discord user tokens are not supported.
- Allow WebRequest to Discord in MT5. Live messaging requires a normal chart, an internet connection, and a running terminal. Strategy Tester cannot demonstrate live Discord networking.
- Trade execution requires both MT5 and chart Algo Trading permissions, the local execution authorization and the dashboard entry switch.
- Use separate channels for provider signals and private control. Confirm actual messages and demo fills before relying on a route.
- Signal parsing uses supported structured text. Screenshots, OCR, entry ranges, multiple targets and arbitrary free-form messages are not supported.
- Custom indicators must expose usable buffers and be compatible with the supplied input types. Broker rules, instrument specifications and execution conditions apply.
- Netting positions may combine sources; mixed ownership can prevent independent control. Test your intended account and indicator setup on demo.

Your purchase includes

The MT5 utility, PDF guide, online course, MQL5 channel access and setup assistance. Message Issam on MQL5 to arrange your free Smart Universal Expert Advisor gift. The gift is optional and no review is required.

CYNEX / DISCORD MT5

Your first connection, step by step.

Install. Connect. Configure. Verify on demo.

01 INSTALL

Attach to a normal MT5 demo chart.
Allow Discord WebRequest.

02 CONNECT

Create your bot, set channel IDs
and pair your control user.

03 CONFIGURE

Review lots, symbols and protection.
Preview indicator A and B.

04 VERIFY

Test publication, a small order
and its confirmed closure.

ISSAM ALGO

PDF guide + online course + setup assistance | Contact Issam privately on MQL5

12 / 12

Start with the complete user guide

The separate 24-page guide covers bot creation and installation, channel permissions, token connection, pairing, receiving, publishing, custom indicators A and B, the dashboard settings, commands and demo checks.

Use the online lesson with the guide. Verify your exact broker and indicator configuration on demo before normal operation.
